

BAB III

ANALISIS DAN PERANCANGAN

III.1. Analisis Masalah

Google Drive adalah layanan penyimpanan daring milik *Google* yang diluncurkan pada 24 April 2012. Layanan ini merupakan ekstensi dari *Google Docs* dan akan mengganti URL *docs.google.com* dengan *drive.google.com* setelah diaktifkan. *Google Drive* memberikan layanan penyimpanan gratis sebesar 15 GB dan dapat ditambahkan dengan pembayaran tertentu. Analisa sistem pada yang berjalan bertujuan untuk mengidentifikasi serta melakukan evaluasi terhadap *Perancangan Aplikasi Pengamanan Data Pada Google Drive Dengan Menggunakan Algoritma TEA*. Adapun masalah yang terdapat pada sistem yang telah lama adalah tidak adanya sistem keamanan data yang aman pada penyimpanan data di *google drive* dan belum berkembangnya algoritma Kriptografi TEA (*Tiny Encryption Algorithm*) dalam sistem keamanan *google drive*.

III.1.1.Strategi Pemecahan Masalah

Sistem yang sedang berjalan saat ini masih terdapat beberapa kekurangan yang terdapat pada sistem yang telah ada sebelumnya, berikut adalah kekurangan pada sistem yang telah berjalan :

1. Merancang sebuah aplikasi *google drive* dengan memanfaatkan sistem keamanan data yang dapat menjaga kerahasiaan dan keamanan pengiriman data pada aplikasi *google drive*.

2. Merancang dan membangun sebuah aplikasi *google drive* dengan menggunakan Kriptografi TEA (*Tiny Encryption Algorithm*).

III.1.2. Analisa Kebutuhan NonFungsional

Kebutuhan NonFungsional yang dibutuhkan dalam mengakses sistem adalah sebagai berikut :

1. PC atau Notebook Core 2
2. Javascript
3. Netbeans

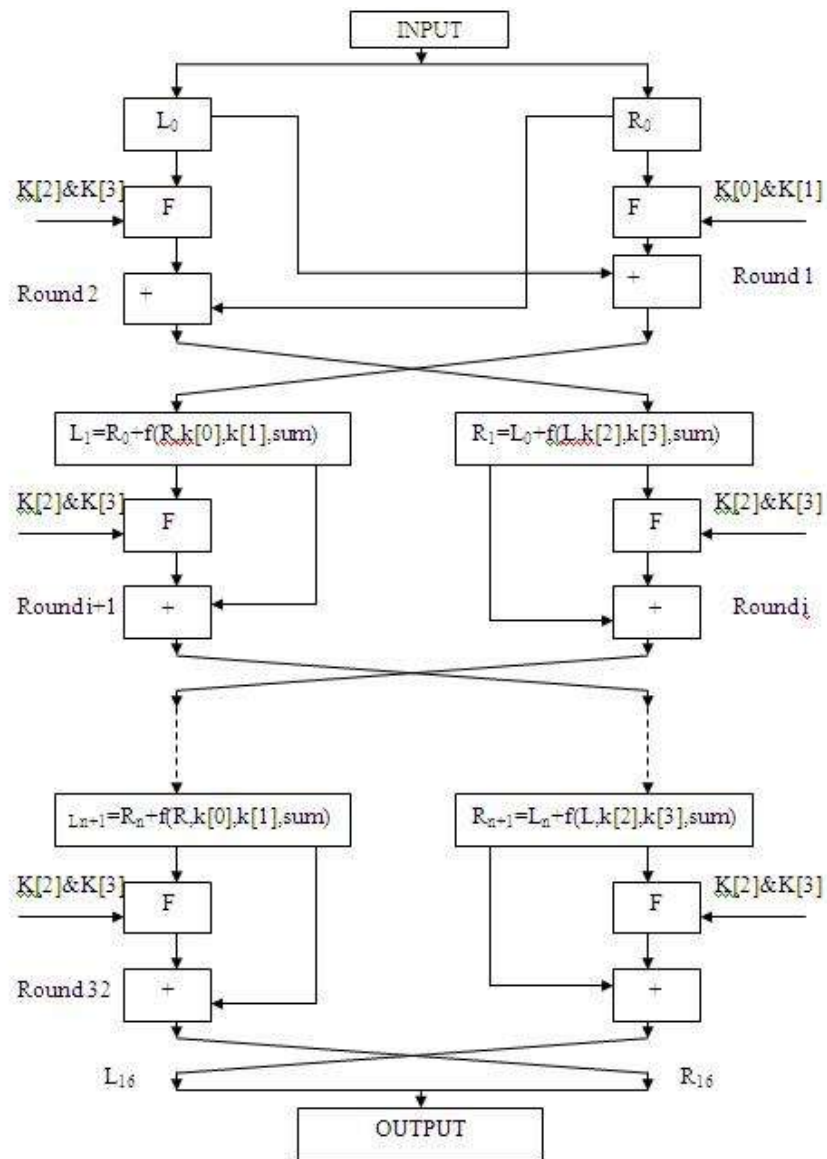

III.2. Penerapan Algoritma TEA

Tiny Encryption Algorithm (TEA) merupakan suatu algoritma sandi yang diciptakan oleh David J. Wheeler dan Roger M. Needham dari Cambridge University tahun 1994. Algoritma ini merupakan algoritma penyandian block cipher yang dirancang untuk penggunaan memori yang seminimal mungkin dengan kecepatan proses yang maksimal.

Sistem penyandian TEA menggunakan proses feistel network dengan menambahkan fungsi matematik berupa penambahan dan pengurangan sebagai operator pembalik selain XOR. Hal ini dimaksudkan untuk menciptakan sifat non-linearitas. Pergeseran dua arah (ke kiri dan ke kanan) menyebabkan semua bit kunci dan data bercampur secara berulang ulang.

TEA memproses 64-bit input sekali waktu dan menghasilkan 64-bit output. TEA menyimpan 64-bit input kedalam L0 dan R0 masing masing 32-bit, sedangkan 128-bit kunci disimpan kedalam k[0], k[1], k[2], dan k[3] yang masing masing berisi 32-bit. Diharapkan teknik ini cukup dapat mencegah penggunaan teknik exshautive search secara efektif. Hasil

outputnya akan disimpan dalam L16 dan R16. Bilangan delta konstan yang digunakan adalah 9E3779B9, dimana bilangan delta berasal dari golden number, digunakan $\delta = (\sqrt{5} - 1)231$. Suatu bilangan delta ganda yang berbeda digunakan dalam setiap roundnya sehingga tidak ada bit dari perkalian yang tidak berubah secara teratur. Berbeda dengan struktur feistel yang semula hanya mengoperasikan satu sisi yaitu sisi sebelah kanan dengan sebuah fungsi F, pada algoritma TEA kedua sisi dioperasikan dengan sebuah fungsi yang sama.

Gambar III.1. Enkripsi Data
(Sumber : Mukti Qamal ; 2014 : 22)

Untuk melakukan enkripsi, Proses diawali dengan *input-bit* teks sebanyak 64-bit, kemudian 64-bit teks tersebut dibagi menjadi dua bagian, yaitu sisi kiri (L0) sebanyak 32-bit dan sisi kanan (R0) sebanyak 32-bit. Setiap bagian teks akan dioperasikan sendiri-sendiri. R0 (Z) akan digeser ke kiri sebanyak empat (4) kali dan ditambahkan dengan kunci $k[0]$, sementara itu Z ditambah dengan sum (δ) yang merupakan konstanta. Hasil penambahan ini di-XOR-kan dengan penambahan sebelumnya. Langkah selanjutnya di-XOR-kan dengan hasil penambahan antara Z yang digeser ke kanan sebanyak lima (5) kali dengan kunci $k[1]$. Hasil tersebut kemudian ditambahkan dengan L0 (Y) yang akan menjadi R1 (Mukti Qamal ; 2014 : 22).

Teknik dekripsi, merupakan kebalikan dari enkripsi, pesan yang telah dienkripsi dikembalikan ke bentuk asalnya (*plaintext*) disebut dengan dekripsi pesan. Algoritma yang digunakan untuk dekripsi tentu berbeda dengan yang digunakan untuk enkripsi (Yoga Aprianto ; 2012 : 3).

III.2.1. Studi Kasus Algoritma TEA

Google ID Budi = 100013143816876

Encoding TEA $v = [3496804102, 8462974893]$

Output akhir untuk kata "Halo" diencode kedalam Base64 = "Bv9s0K2/bvg="

Di google drive: !@#%TEA***Bv9s0K2/bvg=

III.3. Perancangan

Desain sistem pada penelitian ini dibagi menjadi dua desain, yaitu desain sistem secara global untuk penggambaran model sistem secara garis besar dan desain sistem secara detail untuk membantu dalam pembuatan sistem.

III.3.1. Desain Sistem

Perancangan Aplikasi Pengamanan Data Pada Google Drive Dengan Menggunakan Algoritma TEA menyajikan informasi data yang dapat digunakan oleh pengguna google drive.

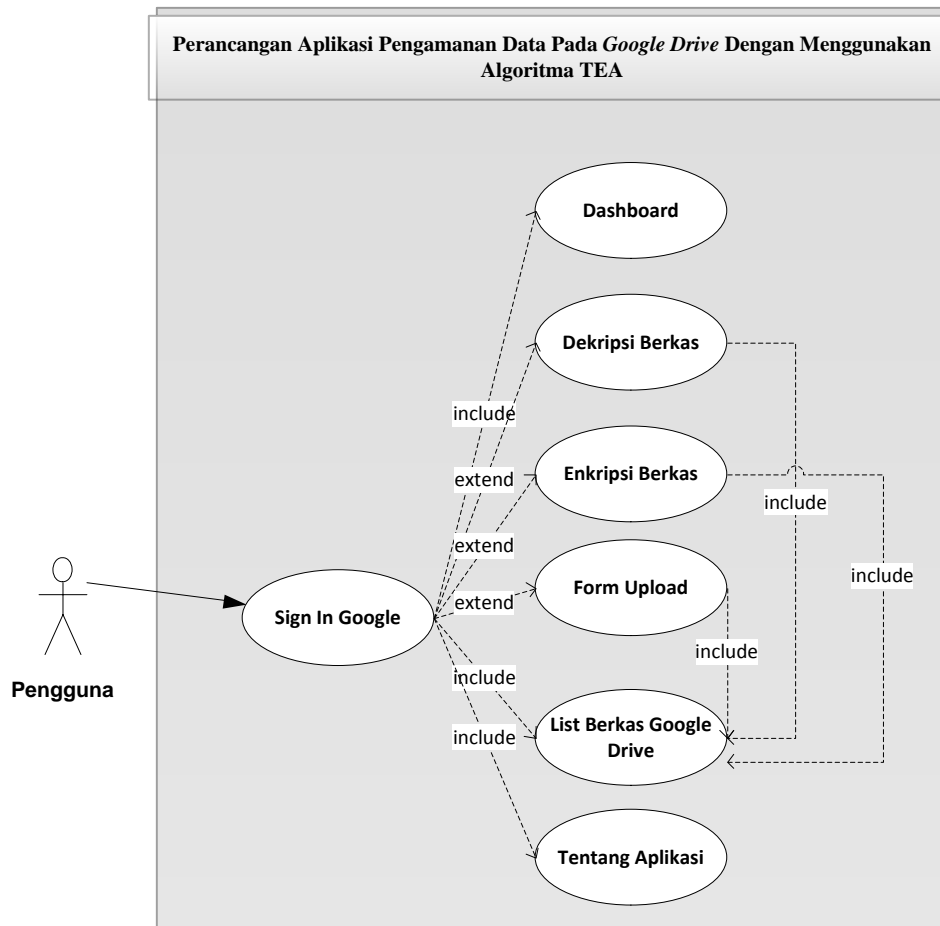

III.3.2. Desain Sistem Secara Global

Desain sistem secara global menggunakan bahasa pemodelan UML yang terdiri dari *Usecase Diagram*, *Activity Diagram* dan *Sequence Diagram*.

III.3.2.1. Usecase Diagram

Dalam penyusunan suatu program diperlukan suatu model data yang berbentuk diagram yang dapat menjelaskan suatu alur proses sistem yang akan di bangun. Dalam penulisan skripsi

ini penulis menggunakan metode UML yang dalam metode itu penulis menerapkan diagram *Use Case*. Maka digambarlah suatu bentuk diagram *Use Case* yang dapat dilihat pada gambar III.2 berikut :

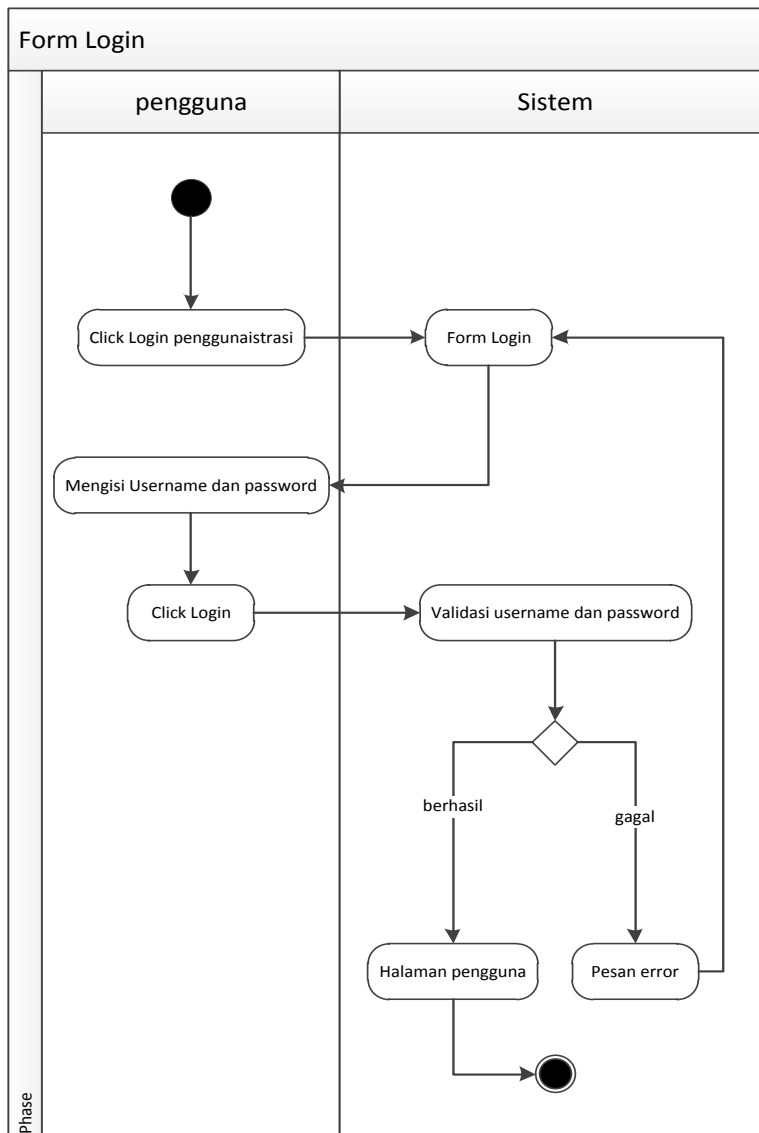

Gambar III.2. Use Case Diagram Aplikasi Google Drive

III.2.2.2. Activity Diagram

Bisnis proses yang telah digambarkan pada *use case diagram* dijabarkan dengan *Activity diagram* :

1. Activity Diagram Login

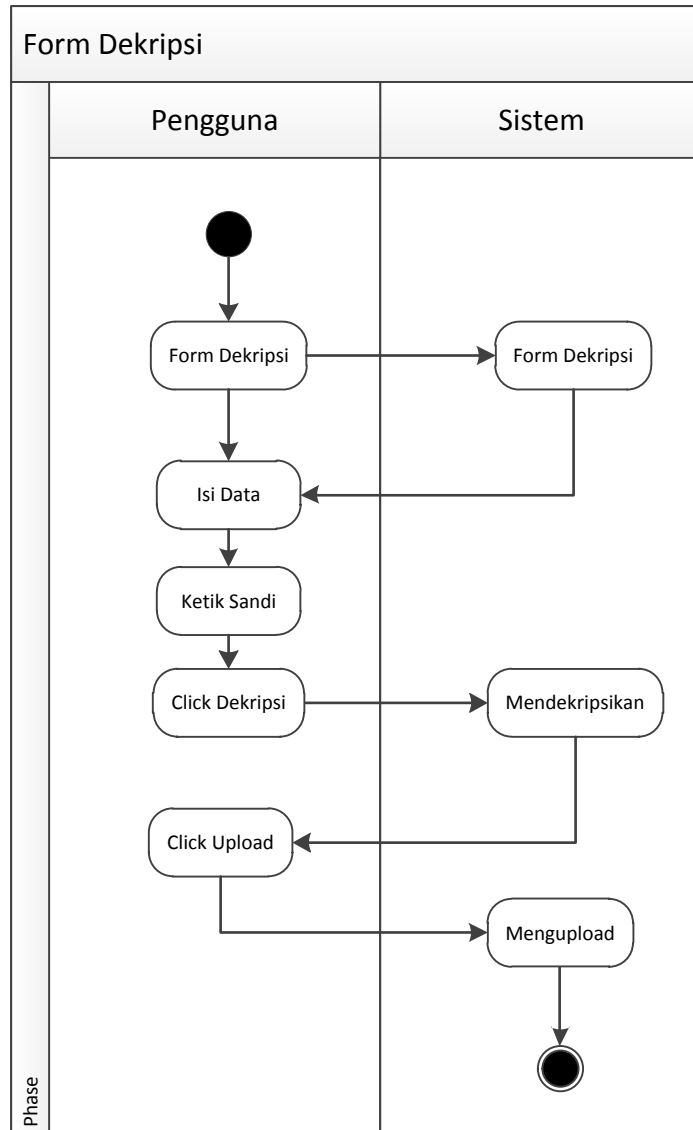

Aktivitas *login* yang dilakukan oleh user dapat diterangkan dengan langkah-langkah *state* berikut :

Gambar III.3. Activity Diagram Login

2. Activity Diagram Dekripsi

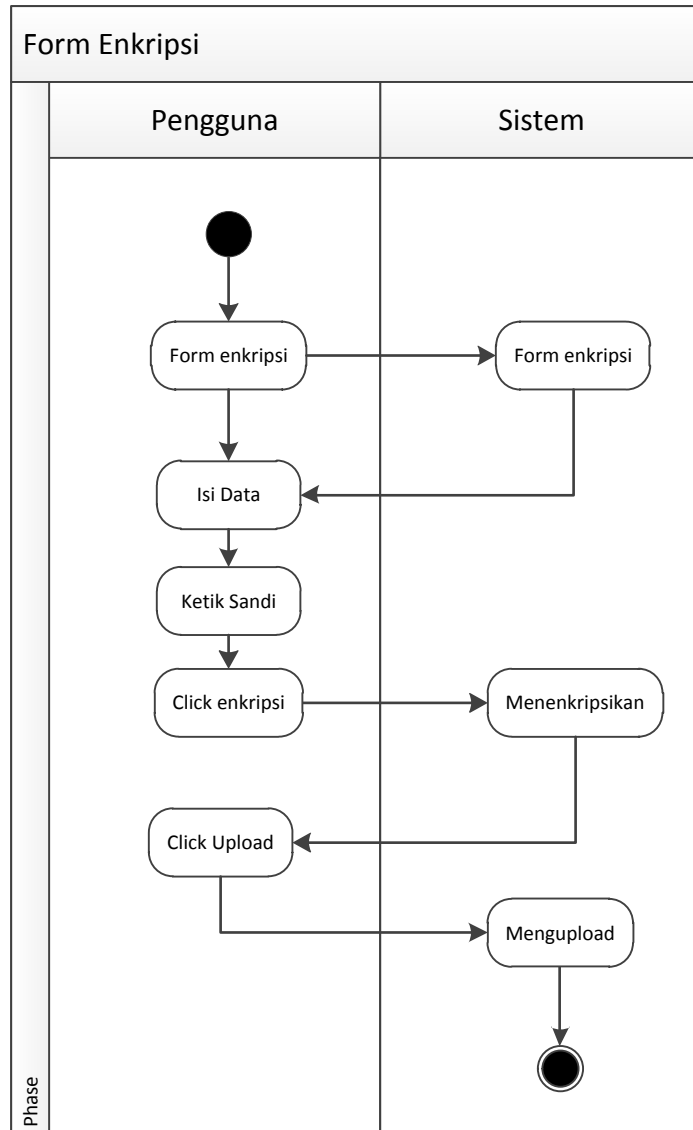

Aktivitas yang dilakukan oleh Admin pada pengolahan dekripsi dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.4 berikut :

Gambar III.4. Activity Diagram Dekripsi

3. Activity Diagram Enkripsi

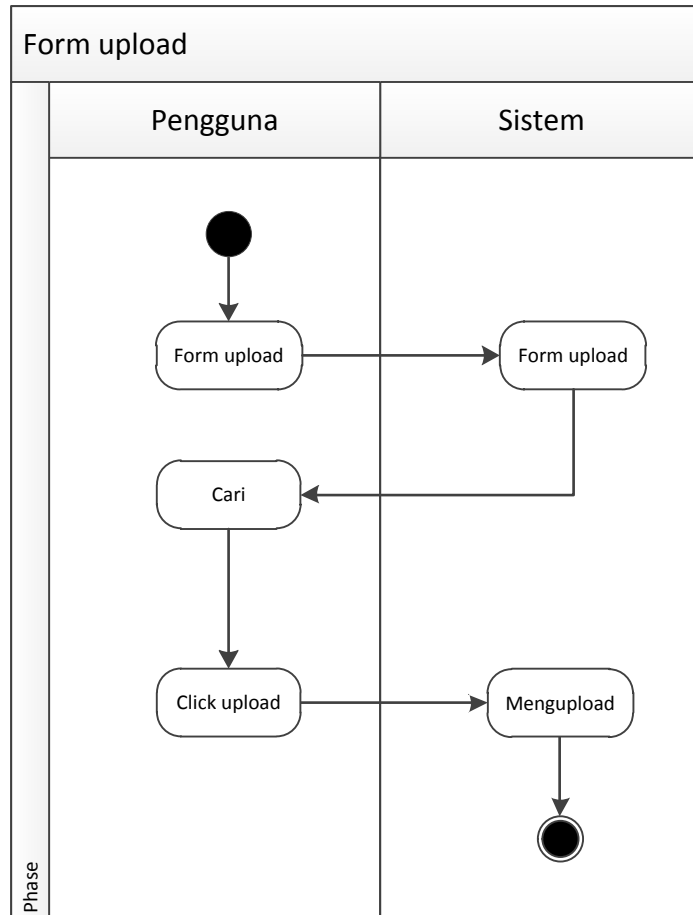

Aktivitas yang dilakukan oleh Admin pada pengolahan enkripsi dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.5 berikut :

Gambar III.5. Activity Diagram Enkripsi

4. Activity Diagram Upload

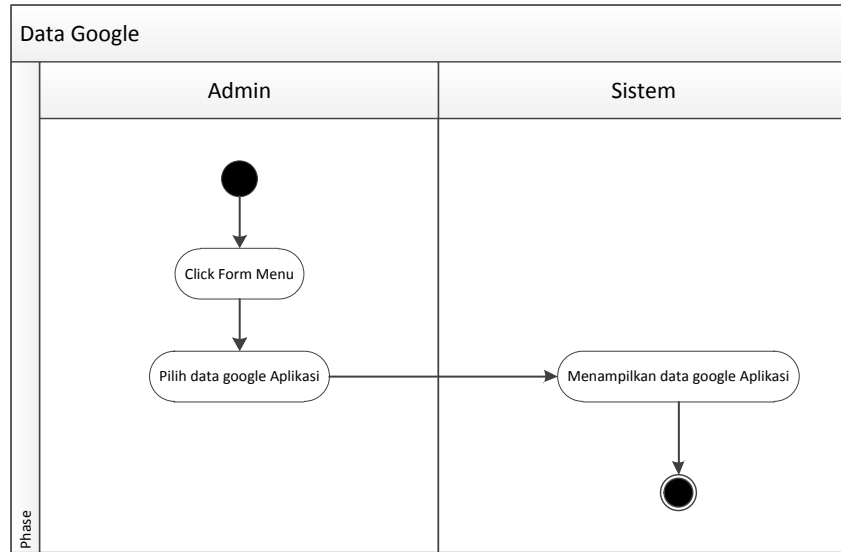

Aktivitas yang dilakukan oleh Admin pada pengolahan upload dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.6 berikut :

Gambar III.6. Activity Diagram Upload

3. Activity Diagram Data Google

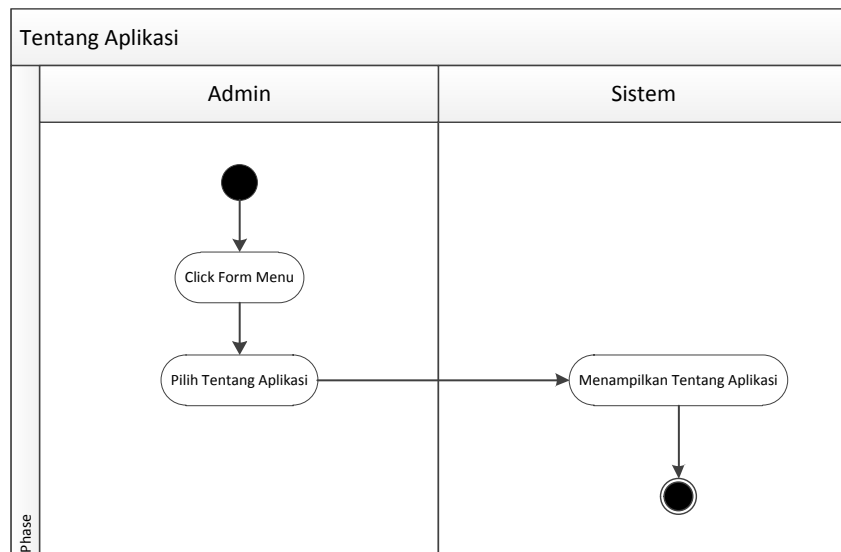

Aktivitas yang dilakukan oleh Admin pada pengolahan data google dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.7 berikut :

Gambar III.7. Activity Diagram Data Google

4. Activity Diagram Tentang

Aktivitas yang dilakukan oleh Admin pada pengolahan tentang dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.8 berikut :

Gambar III.8. Activity Diagram Tentang

III.3.2.3. *Sequence Diagram*

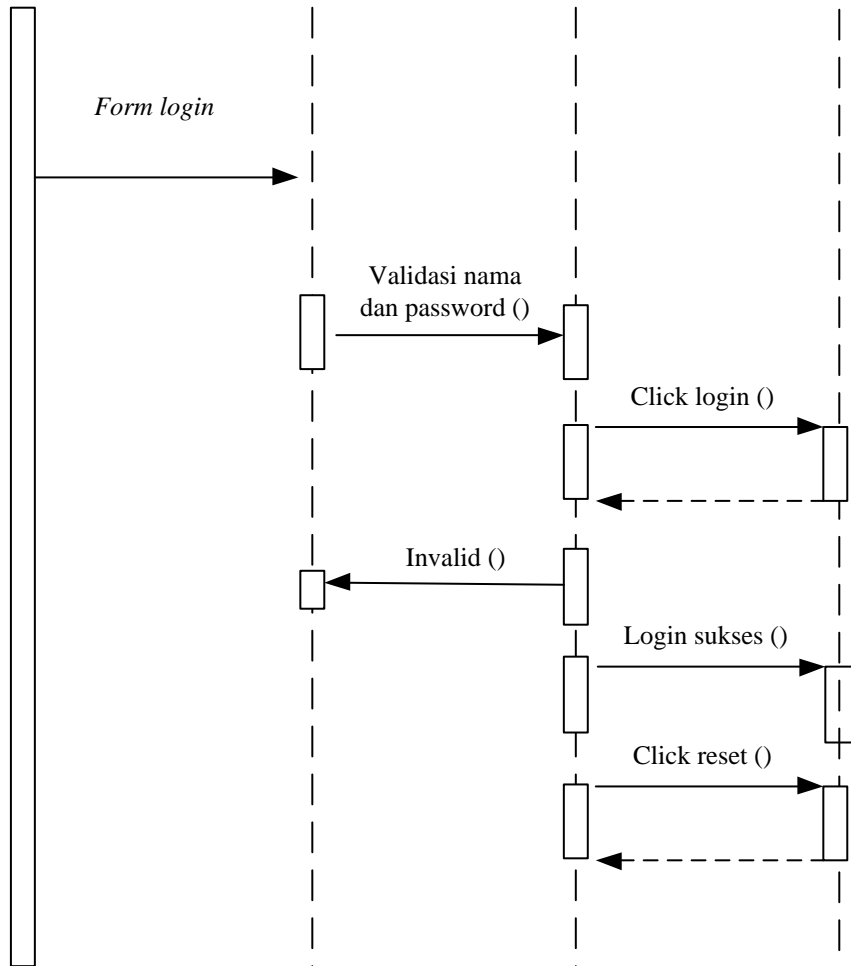

Sequence Diagram (diagram urutan) adalah suatu diagram yang memperlihatkan atau menampilkan interaksi-interaksi antar objek di dalam sistem yang disusun pada sebuah urutan atau rangkaian waktu. Interaksi antar objek tersebut termasuk pengguna, *display*, dan sebagainya berupa pesan/*message*.

Sequence Diagram digunakan untuk menggambarkan skenario atau rangkaian langkah – langkah yang dilakukan sebagai sebuah respon dari suatu kejadian/event untuk menghasilkan output tertentu. *Sequence Diagram* diawali dari apa yang me-trigger aktivitas tersebut, proses dan perubahan apa saja yang terjadi secara internal dan output apa yang dihasilkan.

Diagram ini secara khusus berasosiasi dengan use case diagram. *Sequence diagram* juga memperlihatkan tahap demi tahap apa yang seharusnya terjadi untuk menghasilkan sesuatu di dalam use case. *Sequence Diagram* juga dapat merubah atribut atau method pada class yang telah dibentuk oleh class diagram, bahkan menciptakan sebuah class baru. *Sequence Diagram* memodelkan aliran logika dalam sebuah sistem dalam cara yang visual.

1. *Sequence Diagram Login*

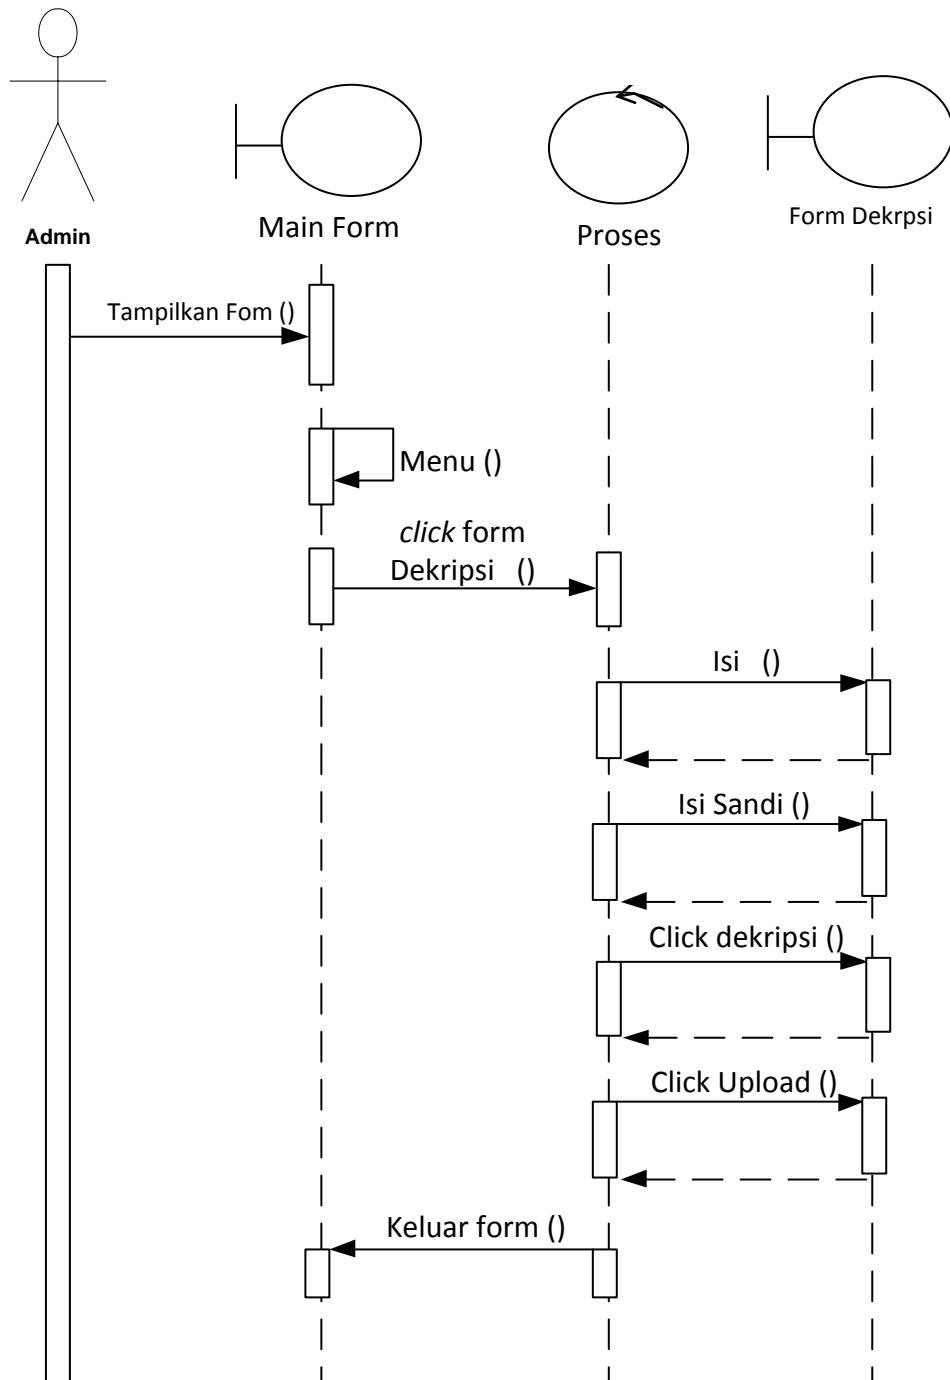

Serangkaian kinerja sistem *login* yang dilakukan oleh user dapat diterangkan dengan langkah-langkah *state* berikut :

Gambar III.9. Sequence Diagram Login

2. Sequence Diagram Dekripsi

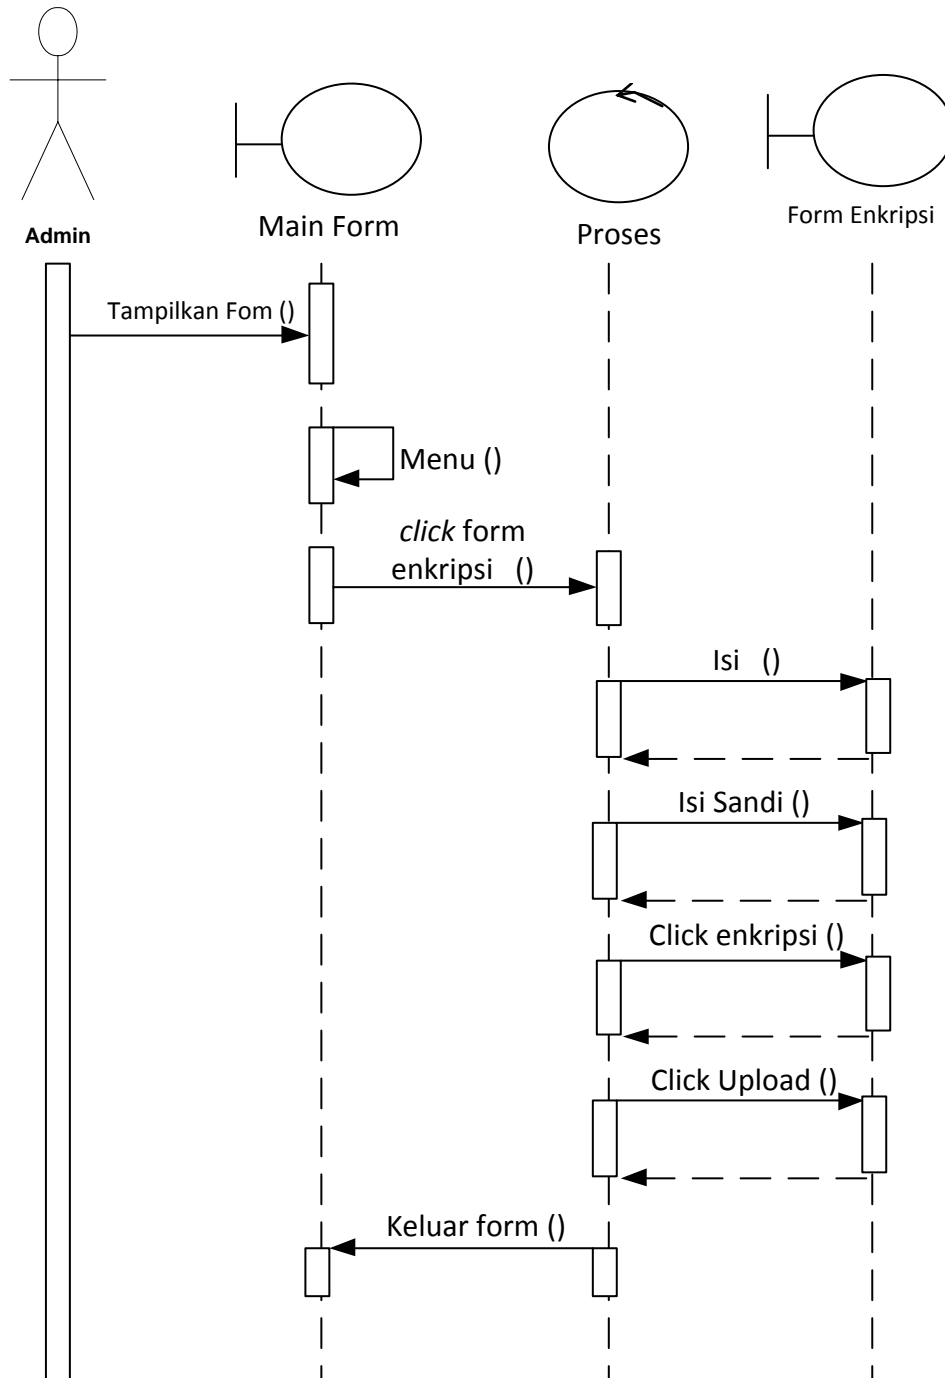

Serangkaian kinerja sistem yang dilakukan oleh Admin pada pengolahan dekripsi dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.10 berikut :

Gambar III.10. Sequence Diagram Dekripsi

3. Sequence Diagram Enkripsi

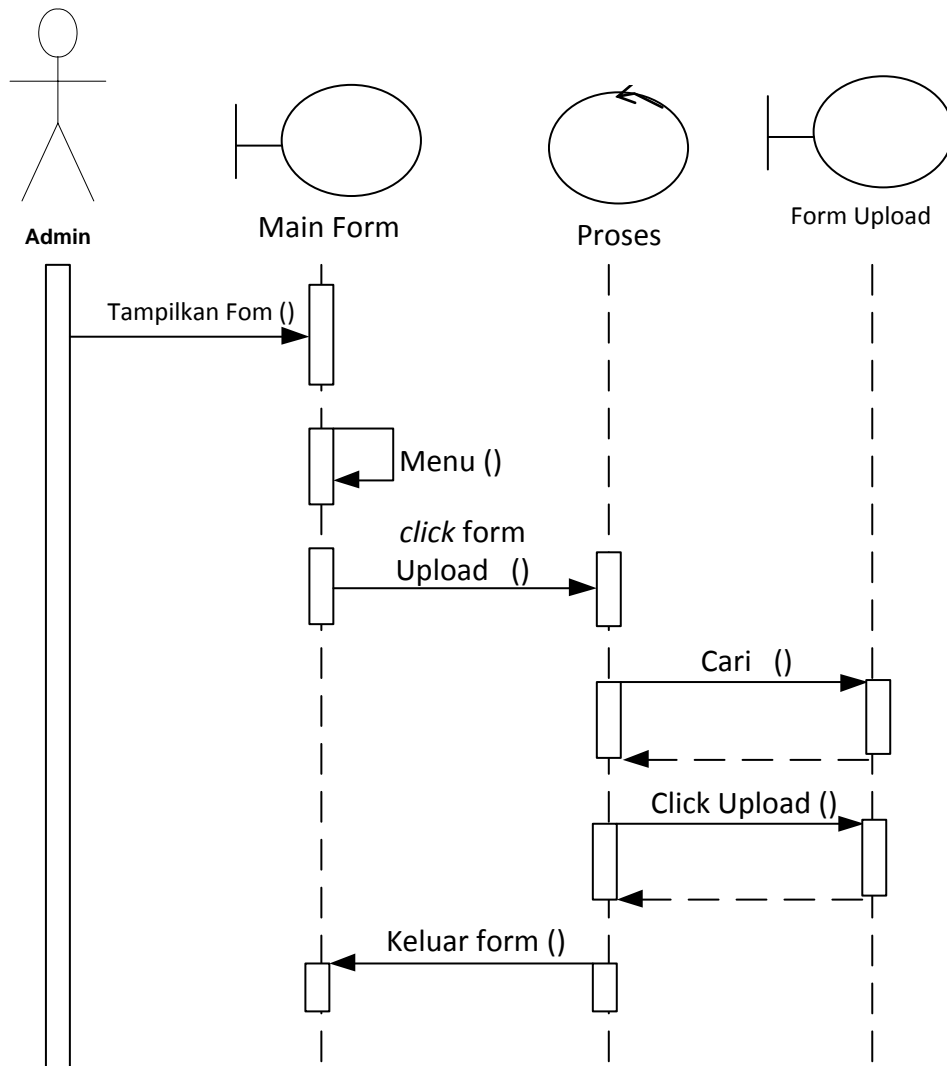

Serangkaian kinerja sistem yang dilakukan oleh Admin pada pengolahan enkripsi dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.11 berikut :

Gambar III.11. Sequence Diagram Enkripsi

4. Sequence Diagram Upload

Serangkaian kinerja sistem yang dilakukan oleh Admin pada pengolahan upload dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.12 berikut :

Gambar III.12. *Sequence Diagram Upload*

5. *Sequence Diagram Data Google*

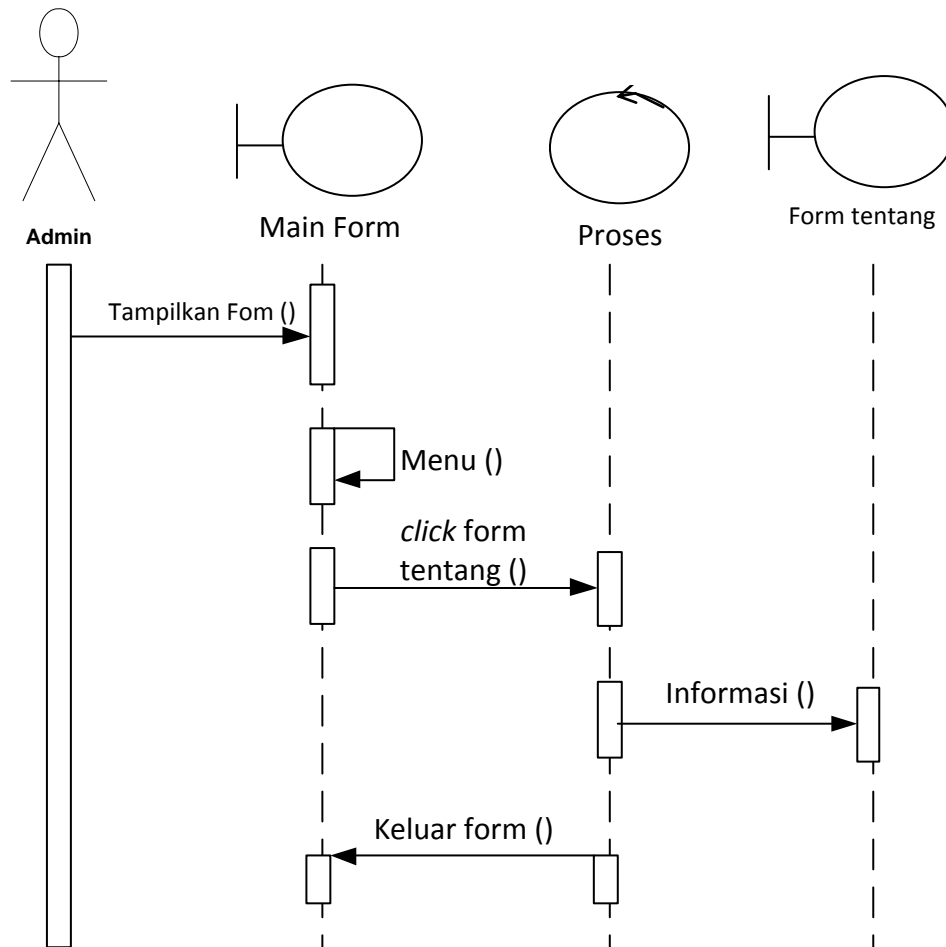

Serangkaian kinerja sistem yang dilakukan oleh Admin pada pengolahan data google dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.13 berikut :

Gambar III.13. Sequence Diagram Data Google

6. Sequence Diagram Tentang

Serangkaian kinerja sistem yang dilakukan oleh Admin pada pengolahan tentang dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.14 berikut :

Gambar III.14. Sequence Diagram Tentang

III.2.3. Desain Sistem Secara Detail

Tahap perancangan berikutnya yaitu desain sistem secara detail yang meliputi desain sistem.

1. Tampilan *Form Login*

Tampilan sistem *login* yang dilakukan oleh user dapat diterangkan dengan langkah-langkah *state* berikut :

The image shows a login form titled "Google". At the top center, there is a box labeled "Picture". Below it, there are two input fields: "Masukkan Email :" and "Masukkan Password :". At the bottom, there is a "Sign In" button.

Gambar III.15. Tampilan *Form Login*

2. Tampilan *Form* Dekripsi

Tampilan sistem yang dilakukan oleh Admin pada pengolahan dekripsi dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.16 berikut :

The image shows the "Google Drive TEA" interface. It has a navigation bar with tabs: "Dashboard", "Drive", "Upload", "Enkripsi", "Dekripsi", and "Tentang". The "Dekripsi" tab is selected. The main area is divided into two columns. The left column is titled "Daftar Berkas" and is currently empty. The right column is titled "Konten" and contains a large empty text area. Below the "Konten" area is a section titled "Dekripsi Konten" with another large empty text area. At the bottom of the right column, there is a "Sandi :" label followed by a small input field. Below the input field are two buttons: "Dekripsi" and "Upload".

Gambar III.16. Tampilan *Form* Dekripsi

3. Tampilan *Form* Enkripsi

Tampilan sistem yang dilakukan oleh Admin pada pengolahan enkripsi dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.17 berikut :

The screenshot shows a web application titled "Google Drive TEA". At the top, there is a navigation bar with the following items: Dashboard, Drive, Upload, Enkripsi, Dekripsi, and Tentang. The main content area is divided into two columns. The left column is titled "Daftar Berkas" and is currently empty. The right column contains the encryption form, which includes three input fields: "Konten Plain :", "Konten Chipper :", and "Sandi :". Below these fields are two buttons: "Enkripsi" and "Upload".

Gambar III.17. Tampilan *Form* Enkripsi

4. Tampilan *Form* Upload

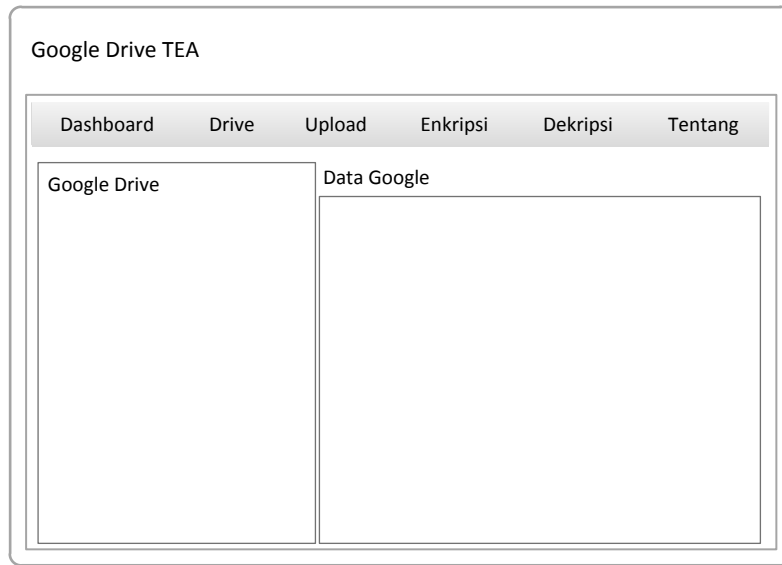

Tampilan sistem yang dilakukan oleh Admin pada pengolahan upload dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.18 berikut :

The screenshot shows the same web application "Google Drive TEA" with the navigation bar. The main content area is now the "Upload" page. The left sidebar is titled "Pilih Berkas" and contains a button with three dots "...". The right column is titled "Upload" and contains a "Preview Konten :" text area. At the bottom of the right column is an "Upload" button.

Gambar III.18. Tampilan *Form* Upload

5. Tampilan *Form* Data Google

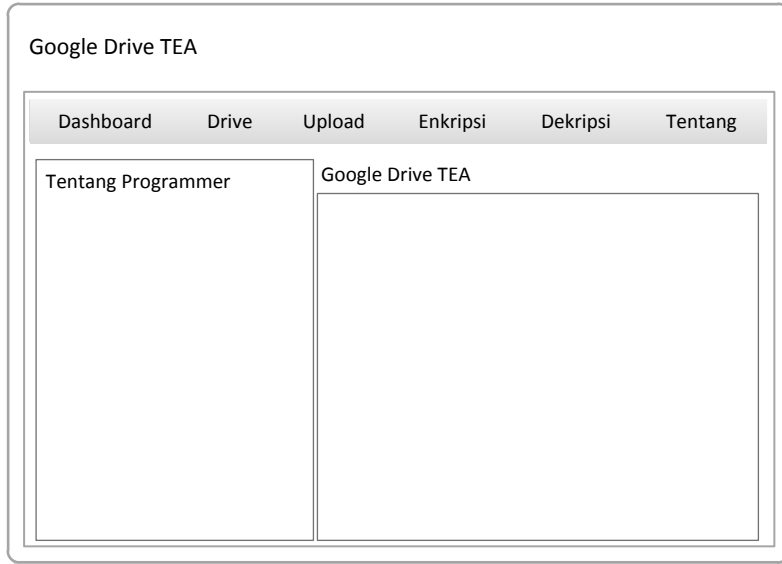

Tampilan sistem yang dilakukan oleh Admin pada pengolahan data google dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.19 berikut :

Gambar III.19. Tampilan *Form* Data Google

6. Tampilan *Form* Tentang

Tampilan sistem yang dilakukan oleh Admin pada pengolahan tentang dapat diterangkan dengan langkah-langkah *state* berikut, yang ditunjukkan pada gambar III.20 berikut :

Gambar III.20. Tampilan *Form* Tentang
