

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusions

It can be seen that , the reading ability of the two groups of the students who are taught by using Presentation, Practice, Production (PPP) before the treatment is not significantly different (i.e $65,16 > 57,66$). After the treatment was given to the experimental group there was a difference in the mean score. The mean score of the experimental group after the treatment was higher than the control class (i.e. $84,66 > 70,33$). It means that the treatment given had a positive effect on students' reading ability in the experimental class. The effect of Presentation, Practice, Production (PPP) model learning on the students' reading ability in this research can also be seen from the result of the mean of the gain score in the two groups. We can see the mean of the gain score in the experimental group is higher than that of in the control group ($19,50 > 12,66$). It proves that the Presentation, Practice, Production (PPP) is more effective than those who are taught without using it. There is a significant effect between the reading ability of the students who were taught by using Presentation, Practice, Production (PPP) and those who were taught without it. It is proved from the result of the value of sign. (2-tailed) was lower than 0.05 ($0,00 < 0,05$). It means that there is a significant effect between reading comprehension ability of the students who are taught using the Presentation, Practice, Production (PPP) model

learning and those who are taught without it. Therefore, it can be concluded that PPP significantly affects students reading ability.

5.2 Suggestions

The result of the research showed that using the PPP can give effect to students' reading ability, there are three the following suggestions are offered:

- The researcher suggests for the teacher can use PPP learning model to increase their reading ability to make students more motivated.
- The researcher suggests for students can improve their reading ability and understand about the contents of the text to be read and answered some question on the text.
- The result of this research should be useful for researchers who apply PPP as the application of learning to develop students' abilities in reading or other subject. And the result of this study will be useful other researchers.
