Dear authors,

we have the following recommendation about your submission to ICoSTEC2023 entitled

“Transfer Learning for Feral Cat Classification Using Logistic Regression”

Editor Suggestions:

- Please improve the paper using the ICoSTEC format and write the revised manuscript carefully. We will resend the uncorrected-format manuscript via email if it needs to be revised.
- We found several Indonesian terms in this manuscript. Please translate the Indonesian terms into English, both in content and references.
- Please Check the manuscript typos and improve the English Presentation using advanced tools like Grammarly.com

Authors can download the ICoSTEC format on the official web.

Reviewer Comments:

1. In Chapter 1, the author can describe the background of the study using past articles. What is the problem with the past techniques? Thus the authors proposed machine learning methods to deal with the issue.
2. Chapter II (Methods) must display the math formulation of Logistic Regression. As we know, LR is a standard machine learning algorithm to address classification problems using image datasets. Thus, the author should explain the significance of this study when implementing a standard ML algorithm like LR in VGG Net.
3. In the Result Chapter, the authors can present the tuning of LR in this case. It should be convinced what element of LR can increase the performance of the produced model. Is there any influence of a large dataset on the training time? The author must describe it in depth.
4. English Presentation should be improved using active voice in several parts of this manuscript.

Please re-submit the revised version soon after editing the manuscript carefully.

Best regards,
ICoSTEC 2023 Scientific Committee
